

## Make Your Own Rain Gauge!

### Materials:

Water bottle  
Ruler  
Permanent marker

### How To:

- ☐ Have your parents help you cut the top of the water bottle off, make sure that it is a straight cylinder
- ☐ Using the Ruler and permanent marker, place the Ruler next to the water bottle, make marks with the permanent marker on the bottle at every inch and half inch on the ruler
- ☐ Place outside in an open area to catch the rain.
- ☐ Each time it rains record the amount and empty it after you record your information.
- ☐ Add the rain amounts from the rest of the month to find out how many inches of rain we get in that month.
